Pricing & Product Strategy

The operating guide for pricing, packaging, customer value, and billing logic

CORE PRINCIPLE

Meter on clients. Never on reports.

Every plan gets the complete Reporta product. The only meaningful plan difference is how many clients the account can manage.

Internal product / business reference · September 2026

The pricing model we should build

Reporta should launch as a tiered subscription with client-count limits. The customer pays a predictable monthly or annual subscription, receives the complete product, and gets a defined number of active clients. Reports are unlimited.

This follows the value metric: Reporta is valuable because it removes recurring reporting work across a customer's client portfolio. Charging per report would tax the exact behavior we want customers to adopt. Current SaaS pricing guidance also emphasizes selecting a metric that reflects customer value and keeping pricing predictable; Stripe specifically warns that usage-based pricing can create surprise bills when the usage metric is poorly chosen. [\[cite\]](#)[\[turn0search0\]](#)[\[turn0search3\]](#)

Trial	Solo	Freelancer ★	Agency
Free 14 days No card	\$19/mo \$15/mo annual 3 clients	\$39/mo \$32/mo annual 10 clients	\$89/mo \$74/mo annual 30 clients

Additional clients: +\$4/client/month above the included cap, with billing logic designed so customers are encouraged toward the next tier when that is cheaper.

Annual billing: two months free — \$180/year Solo, \$384/year Freelancer, \$888/year Agency.

Why clients are the meter

A report is the product. If a customer generates 40 reports in a month, that is not a problem. It means Reporta is doing its job. A report also costs relatively little compared with the human time it replaces.

- Client count tracks value: more clients generally means more recurring reporting work removed.
- Unlimited reports encourages adoption: customers can regenerate, review, correct, and resend without worrying about credits.
- Simple pricing is easier to sell: a buyer immediately understands “10 clients for \$39.”
- No feature maze: customers don't have to choose between integrations, AI, white-labeling, or PDF export.
- Expansion is natural: as a customer wins more clients, their Reporta subscription grows with them.

Rule: never turn the report itself into a scarce resource unless the economics of the product fundamentally change.

What every paid customer receives

Capability	Included on every plan	Why it matters
Meta Ads	☐	Pull campaign / advertising performance data.
Google Analytics 4	☐	Connect website analytics and performance context.
Google Ads	☐	Include paid search performance.
Client management	☐	Keep accounts, connections, and branding separated by client.
White-label branding	☐	The client's document looks like the agency produced it.
Template builder	☐	Logo, colors, intro copy, and metric selection.
AI executive summary	☐	Turn normalized metrics into a concise interpretation.
Data validation / guardrails	☐	Check generated numbers against source metrics.
Unlimited reports	☐	Generate as often as needed.
Live generation progress	☐	Show real pipeline stages instead of a fake timer.

PDF export	☐	Produce the actual client deliverable.
Email delivery	☐	Send the finished report without another workflow.
Comparison metrics	☐	Show current vs previous period and deltas.

Packaging rule: do not create “AI plan,” “white-label plan,” or “integration add-ons.” Those features are the reason the customer buys Reporta. They should be available from the beginning.

Each tier explained

TRIAL

Free · 14 days · no card · Full product access

Purpose: remove purchase risk and let the prospect generate a real report before paying.

Includes: All integrations · All white-label features · AI summary · Unlimited report generation during trial · No payment card required

Pricing logic: At trial end: require a paid plan to continue creating/managing client reports. Preserve the customer's data for a reasonable grace period so conversion does not feel punitive.

SOLO

\$19/mo · \$180/year · 3 clients

Purpose: the entry plan for a freelancer with a small client book.

Includes: Complete product · Unlimited reports · 3 active clients · Monthly or annual billing · Annual effective price: \$15/mo

Pricing logic: The customer is paying roughly \$6.33 per included client monthly, before annual discount.

FREELANCER ★

\$39/mo · \$384/year · 10 clients

Purpose: the core Reporta customer — full-time freelancer or very small shop.

Includes: Complete product · Unlimited reports · 10 active clients · Monthly or annual billing · Annual effective price: \$32/mo

Pricing logic: At the monthly list price, the customer is effectively paying \$3.90 per included client. This should be the default highlighted plan.

AGENCY

\$89/mo · \$888/year · 30 clients

Purpose: small agencies with a larger portfolio.

Includes: Complete product · Unlimited reports · 30 active clients · Monthly or annual billing · Annual effective price: \$74/mo

Pricing logic: At the monthly list price, the customer is effectively paying about \$2.97 per included client. Future team-seat functionality can justify a later price expansion.

ADDITIONAL CLIENTS

+\$4 per active client / month above the plan's included capacity.

Example: Freelancer with 11 clients = $\$39 + \$4 = \$43/\text{mo}$. If the next tier becomes cheaper, recommend or automatically move the customer to the better-value tier according to the billing rules.

How pricing behaves in real life

Customer situation	Recommended billing result
Trial, day 1	\$0. Full product access begins.
Trial converts to Solo	\$19 monthly or \$180 annual, depending on selection.
Solo with 3 clients	\$19/mo. Adding a fourth client triggers upgrade/overage choice.
Freelancer with 10 clients	\$39/mo.
Freelancer with 11 clients	\$43/mo if using +\$4 overage.
Freelancer with 20 clients	Compare against Agency. Agency at \$89 is cheaper than $\$39 + 10 \times \$4 = \$79$? Actually \$79 is still cheaper; at 23 clients, \$91 exceeds Agency, so recommend Agency around 23+.
Agency with 30 clients	\$89/mo.
Agency with 31 clients	\$93/mo with +\$4 overage, unless a future larger tier exists.
Annual customer	Bill the full annual amount upfront; show the equivalent monthly figure for clarity.

Important correction: with a strict \$4 overage, Freelancer remains cheaper than Agency through 22 clients ($\$39 + 12 \times \$4 = \$87$). At 23 clients it becomes \$91, so Agency at \$89 should be the recommended upgrade. This is exactly why the product should show an upgrade recommendation before a customer reaches a more expensive overage state.

06 · CUSTOMER ECONOMICS

The sales argument

Sell time recovered, not AI. A marketer who bills \$60–\$150/hour and spends around two hours producing a client report is spending approximately \$120–\$300 of billable-time capacity on one recurring deliverable.

MANUAL \$120–\$300 estimated time value of one 2-hour report	REPORTA FREELANCER \$39/mo up to 10 clients · unlimited reports
--	---

Core positioning: “Reporta costs less per month than building a single client's report by hand.”

The strongest proof is not the theoretical calculation. It is the customer's first real report: connect one client, generate it, review the summary, and compare the result with the process they normally perform manually.

07 · INTERNAL UNIT ECONOMICS

What Reporta needs to watch

Cost category	Planning assumption	Management rule
Payment processing	Varies by payment method, country, and transaction size	Model actual processor fees from live Stripe data rather than treating a single percentage as universal.
LLM	Very small per-summary cost under efficient models	Track average cost/report and keep it observable; do not expose the raw cost as customer pricing.
Email	Small per-send cost	Monitor delivery volume and provider pricing.
Compute / DB / storage	Shared infrastructure	Track cost per paying account and per active client as scale increases.

Support	Human time can become a real COGS line	Watch tickets/account and plan-specific support burden.
---------	--	---

Do not rely on the earlier “\$1.43 Stripe fee” as a universal truth. Actual payment processing cost depends on transaction method, geography, currency, card mix, taxes, and the processor's current pricing. The business model should therefore use actual processor reports for margin calculations.

The key internal metric is gross margin by plan, followed by CAC, trial-to-paid conversion, churn, expansion revenue, annual-plan adoption, and support cost per account.

What the application should enforce

Stripe should be the billing source of truth; Reporta should be the product-entitlement source of truth. Stripe Billing supports recurring, tiered, and hybrid pricing structures, which gives the implementation room to evolve without redesigning the entire billing model. [cite]turn0search0

Recommended product data:

- subscription_id
- plan_id: trial / solo / freelancer / agency
- billing_interval: month / year
- included_client_limit
- active_client_count
- overage_client_count
- subscription_status
- current_period_end
- founding_customer flag / grandfathered price identifier

Client-count rule: count only active client records that the customer owns and has not archived/deactivated. A disconnected integration should not automatically delete the client; it should affect report-generation readiness, not the billing identity of the client.

Do not meter reports. The report-generation service should not need to ask Stripe whether the customer has remaining report credits. It should only verify that the subscription is active and that the client is within entitlement.

Upgrade behavior: when the customer tries to add a client beyond the included capacity, show the exact consequence before confirming: current plan, current clients, new client count, and resulting price. Never surprise-charge the user.

Downgrade behavior: do not silently delete clients. If the new plan's capacity is lower than the current active-client count, require the user to archive clients or confirm an appropriate overage/upgrade path before the downgrade completes.

What we should not do

1. Never charge per report. It punishes usage and makes the core product feel metered.
2. Never sell AI credits. AI is the mechanism that creates the executive summary, not a separate product.
3. Never hide core integrations behind tiers. Meta + GA4 + Google Ads should be available to every plan.
4. Never remove white-labeling from lower plans. The client's branded deliverable is the core promise.
5. Never surprise customers with overages. Show the price before an action creates a billable client.
6. Do not over-optimize pricing before collecting usage data. Treat pricing as an experiment and adjust from conversion, retention, and expansion evidence. SaaS pricing guidance recommends monitoring the market and customer behavior rather than assuming the first price is permanent. [cite]turn0search0[turn0search8]
7. Do not make team seats the current differentiator. Multi-user support is not the current product; introduce it later when it is genuinely valuable.

Founding customers and future expansion

Founding 100: the first 50–100 paying customers can keep their launch price for life. This creates a legitimate early-adopter reason to buy while giving Reporta a cohort for testimonials, case studies, feedback, and referrals.

Do not promise every future feature forever. Grandfather the commercial price and current core entitlement; future major features can be introduced under a clearly defined product policy.

Team seats later: once multi-user organizations exist, Agency can evolve into a stronger organizational product. That is a better reason to increase Agency pricing than simply adding more report features.

Permanent free tier: defer this experiment. The 14-day full-access trial is cleaner initially. A future one-client free plan with a small “Made with Reporta” footer could become a distribution engine, but it conflicts slightly with the white-label promise and should be tested rather than assumed.

11 · METRICS

How we know whether the pricing is working

Metric	What it tells us	Desired interpretation
Trial → paid	Can prospects experience enough value in 14 days?	Higher is better, but inspect by acquisition channel.
Clients connected / account	Actual value metric	Shows whether client-based packaging matches usage.
Reports generated / client	Product engagement	Unlimited reports should increase use, not reduce it.
Reports sent / client	Whether output reaches real customers	Strong indicator of real-world adoption.
Monthly churn	Whether customers keep seeing value	Watch by plan and client count.
Annual adoption	Cash flow + retention signal	Track whether discount is strong enough without over-discounting.
Expansion revenue	Whether growing customers pay more	Should come naturally from additional clients / tier upgrades.
Support cost / account	Operational burden	Prevents low-price plans from becoming support-heavy.

The model in one page

TRIAL	SOLO	FREELANCER □	AGENCY
Free / 14 days No card	\$19/mo \$180/year 3 clients	\$39/mo \$384/year 10 clients	\$89/mo \$888/year 30 clients
Full access	Everything	Everything	Everything

Everything means: Meta Ads + Google Analytics 4 + Google Ads + client management + white-labeling + template builder + AI executive summary + validation + unlimited reports + PDF export + email delivery + comparison metrics.

Meter: active clients only. Never meter: reports, AI summaries, integrations, branding, PDF exports, or emails.

Overage: +\$4 per active client above plan cap, with an upgrade recommendation whenever a higher tier becomes the better value.

Annual: 2 months free. \$180 Solo, \$384 Freelancer, \$888 Agency.

Positioning: “The competition sells a dashboard. We deliver the deliverable.”

Economic promise: “Reporta costs less per month than building a single client's report by hand.”

Product promise: “Connect the client's accounts. Generate. Review. Send.”

This document is an internal strategy and implementation reference. Prices should be reviewed against actual conversion, churn, infrastructure, payment-processing, support, and AI costs after launch.
